EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with CAROLYN DAUMGARDNER on April 10, 2006.

Claim 6 is amended as follows.

Claim 6. The MPEG data recording apparatus according to claim 2, further comprising:
a data rate detecting section having an input terminal connected to said output terminal of said IEEE 1394 interface and serving to detect a data volume to be input per unit time as data rate information from said MPEG data,

wherein said input terminal of said buffer control section is also connected to an output terminal of said data rate detecting section,

said buffer control section has a delay time for which a user operates a control panel on said external device to issue a command for a recording start operation and said buffer control section then receives said recording control code, and

said buffer control section multiplies said delay time by said data rate information to calculate a said data volume to be stored and updated in said FIFO buffer section and determines addresses of a read pointer and a write pointer of said FIFO buffer

section based on said data volume thus calculated, thereby setting said determined addresses to said FIFO buffer section in response to receipt of said data detection signal and said data rate information.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

The present invention is directed to an MPEG data decoding apparatus. Independent claims 1 and 7 identify the uniquely distinct features "a buffer control section having an input terminal connected to said output terminal of said IEEE 1394 interface and said output terminal of said MPEG data detecting section, and serving to output a signal for giving a command for starting a FIFO operation to said control terminal of said FIFO buffer section and to output a signal for giving a command for stopping a recording operation to said control terminal of said data recording section in response to receipt of said data detection signal, and to output a signal for giving a command for reading said MPEG data to said control terminal of said FIFO buffer section and to output a signal for giving a command for starting said recording operation to said control terminal of said data recording section in response to receipt of said recording control code." The closest prior arts Ono et al. (US PG PUB 2003/0031468 A1) and Sugizaki (JPO 11-346345) either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
